MICA 2.0 | F memory operations with compact counted branches
COMMIT on successful response
load destination + base update
store base update only
d_rsp_error=0
next instruction
DREQ / DWAIT
d_req_valid/ready; d_rsp_valid/ready
address = old base
d_rsp_error=1
Access fault: discard pending writes
no base/destination update
failed store must have no side effect
legal
DECODE: read old base/data
F enabled; base != 0 and base != data
check alignment and register IDs
taken
dbnz.s: 2-byte counter branch
counter -= 1; branch if nonzero
